

## CASH VALVES LS SERIES PRESSURE REDUCING AND REGULATING VALVES

High pressure single-seated, spring loaded, direct acting diaphragm type regulators for inlet pressures to 2400 psig (165.5 barg)

### FEATURES

- Automatically reduce high inlet pressures to lower outlet pressures within close limits regardless of fluctuations.
- Designed for use on air, water, oil, oxygen, carbon-dioxide and other gases and fluids.
- Designed and built to meet the rugged requirements of high pressure regulation and reduction.
- Exceptional flow characteristics.
- Stainless steel piston/piston assemblies, cylinders, seat ring and strainer screens as standard.
- NBR diaphragm and O-rings.
- Self-renewable seat ring is simply flipped over and re-installed rather than replaced.
- NPTF 'Dryseal' threaded ends as standard.
- Closing cap or T-handle adjusting screw options available.

### GENERAL APPLICATION

Type LS Series regulators are recommended for use on high pressure test rigs and pressure vessel or casting test equipment, hydraulic cylinders and air tanks.

### TECHNICAL DATA

Materials:	Bronze
Sizes:	1/2", 3/4" (15, 19 mm)
Connections:	Threaded NPTF
Inlet pressure range:	500 to 2400 psig (34.5 to 165.5 barg)
Reduced pressure range:	40 to 500 psig (2.8 to 34.5 barg)
Temperature range:	-40 to 180°F (-40 to 82°C)

## MODELS OVERVIEW

All LS Series valves are designed and built to meet the rugged requirements of a high pressure regulating and reducing valve with a bronze body, spring chamber and bottom plug. Four versions are available:

**Type LS-1** has a metal seat piston and cylinder particularly designed for high or low temperature and high pressure drop applications.

**Type LS-2** has an NBR seat and balanced piston design for applications requiring higher capacities and/or tight shut-off. The balanced design assures close control regardless of inlet pressure fluctuations.

**Type LS-3** is furnished with a modified cylinder and no strainer screen for applications involving heavy or high viscosity fluids.

**Special note:** although the metal to metal seat in the Types LS-1 and LS-3 is stainless steel, which assures maximum seat life and good closure, it will not shut-off drip tight. For installations requiring a definite pressure maximum on the downstream side, it is recommended that a Cash Valve Type FR back pressure valve is installed close to the outlet of the Types LS-1 or LS-3 regulators. For full information on the Type FR, see datasheet VCTDS-00516.
